

LAB 1
Hello World

Create a program that performs the following:

Issues “Hello World” to standard output, also known as the console.
Then return control back to the operating system.

Now modify the standard output to place a blank line using carriage control commands before and after the “Hello World” line.

Such as:

```
(1 blank)
Hello World
(1 blank)
```

Next modify the standard output to place 3 different message lines separated by blank lines .

Such as:

```
(1 blank)
Hello World
(1 blank)
GoodBye World
(1 blank)
That's All Folks !
(1 blank)
```

Note the insertion of the single quote in the last line. Have program return control back to the OS.
